EDGC CMA (Chromosomal Microarray) Test Report

Examinee Name	CUICUY BARRIONUEVO DELFINA			Gender	Female
Examinee ID	D2625701	Date of Draw	24-Jun-2026	D.O.B	2020-07-02
Specimen Type	Blood	Date Received	29-Jun-2026	Client Sample ID	D2625701

Hospital Name or Healthcare Provider	GENDA	Doctor's Name	Pilar Igarreta	Report Date	03-Jul-2026
Address				Contact	

Test Result Image

Interpretation of Test Result

Pathogenic Variant

*deletion(X1) of 2.58 MB (chr22:18,877,787-21,461,607) in the 22q11.21 region, Pathogenic

The deletion is likely to be associated with DiGeorge (DGS) syndrome.

EDGC CMA (Chromosomal Microarray) Test Report

Comment

- The Illumina Infinium GSA contains approximately 750,000 SNPs that are specifically chosen to cover the entire genome with high frequency of alternative alleles across different ethnic groups (<1%).
  This makes it possible to use genotyping data for CNV analysis by utilizing the Log R Ratio (LRR) and B allele frequency (BAF) data from the microarray.
- This test only reports results for CNV (copy number variations) for approximately 91% of the Morbid gene regions provided by OMIM (3,464 out of 3,822 total). This reportable area includes 5,200 diseases out of a total of 5,682 diseases.
- Minimum detection size of deletion is 200kb. 200Kb-1Mb of deletion will only be reported if morbid gene is included. Duplication will be reported regardless of morbid gene if it is greater than 1Mb.
- LOH will be reported if the size is greater than 10Mb.
- It does not include information on abnormalities in chromosomal regions that are not covered by this test. OMIM disease corresponding to each area where CNV is found is a list of diseases matching the Morbid gene, and there may be few direct associations found.
- This inspection strictly complies with quality control standards and reports only verified results.
- This test is using GRCh37/hg19 as a human genome reference.
- More information about duplication/deletion syndromes can be found at https://rarechromo.org/disorder-guides/ and https://www.deciphergenomics.org/.

CNV Test Result

CytoBand	Position	Type	Disease	Inheritance	Gene	Reference
22q11.21	chr22:18877787-21461607	DEL(X1)	Tetralogy of Fallot	Autosomal dominant	TBX1	602054
			Conotruncal anomaly face syndrome	-	TBX1	602054
			DiGeorge syndrome	Autosomal dominant	TBX1	602054
			Velocardiofacial syndrome	Autosomal dominant	TBX1	602054
			Hyperprolinemia, type I	Autosomal recessive	PRODH	606810
			Schizophrenia, susceptibility to, 4	Autosomal dominant	PRODH	606810
			Schizophrenia, susceptibility to	Autosomal dominant	RTN4R	605566
			Glucocorticoid deficiency 5	Autosomal recessive	TXNRD2	606448
			Cerebral dysgenesis, neuropathy, ichthyosis, and palmoplantar keratoderma syndrome	Autosomal recessive	SNAP29	604202
